

# Mobile App

## Revolutionize Your Mobile Experience with Our Cutting-Edge Mobile App

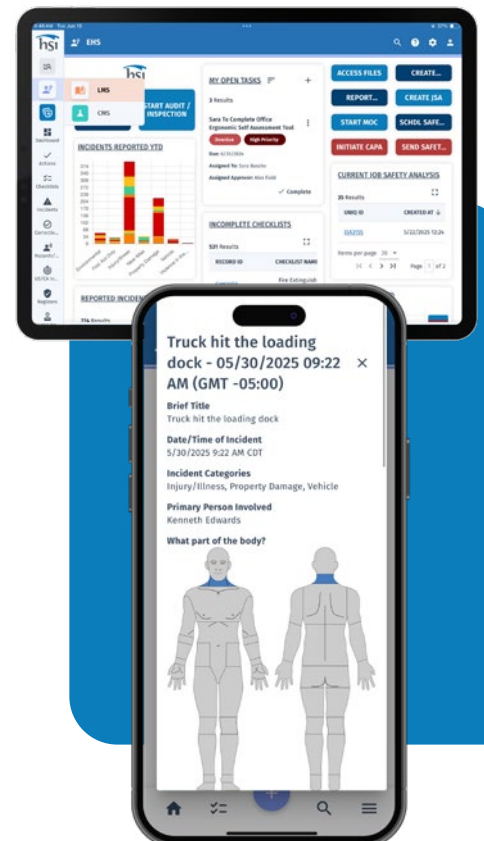

The [HSI mobile app](#) enables you to capture and access critical data right at the point of action—on the production line, in the field, or across worker locations.

With a single platform, you can seamlessly access and toggle between the [EHS](#) and [LMS](#) Systems, including management of chemicals, incidents, checklists, and more. Making it easier than ever to manage all your critical functions from one place.

## Benefits

The [HSI EHS mobile app](#) benefits organizations that require:

- A mobile-friendly solution to access EHS and LMS functionalities on the go
- The ability to view and interact with dashboards, record details, and complete tasks efficiently
- Collect and access data closer to the point of action—in the field, on the production line, and between worker locations
- Single-Sign-On (SSO) ensures login information is protected while making the sign-in process seamless
- An environment that supports accessing training easily, real-time incident reporting, chemical and SDS management, all in one place

# The HSI Difference

## **Improve Communication and Engagement:**

Perform critical tasks like viewing dashboards, recording details, and completing forms from any mobile device connects anyone, anywhere.

**Enhanced User Experience:** Easily switch between the LMS and EHS modules—like chemical management, incident management, workforce training, and more—all in one platform. The new mobile app brings data collection and access closer to the point of action.

**Enhanced Safety Culture:** By providing easy access to training materials, dashboards, and real-time data, the app strengthens engagement in safety processes—an essential factor in maintaining safety and compliance within your workplace.

**Seamless Single Sign-On (SSO):** The app supports SSO, allowing users to securely access the app with their existing credentials without the need for multiple logins, streamlining the user experience, and enhancing security.

**Cross-Platform Compatibility:** The app runs smoothly on various devices and operating systems, ensuring a consistent user experience whether on Android, iOS, or desktop environments.

**Security and Compliance:** Built with the latest security standards, the HSI mobile app ensures that your data is protected, while also supporting compliance with industry regulations.

**Security, Risk, and Compliance:** Adhere to various standards and regulations including OSHA, DOT, OH&S, ISO 9001, ISO 45001, and more.

**Data Capture:** Capture various critical data points such as incident details, audit information, permits, and more, ensuring comprehensive and accurate data management. Geo-Tagging captures data such as location information when recording incidents or accessing materials from various environments.

## Features:

- User-friendly interface to increase engagement
- Submit from anywhere, at any time
- Flexible workflow for improved safety culture
- Advanced reporting
- Connect to user profiles
- Role-based access
- Seamless integration with training, incident tracking, chemical management, and more
- AI-powered intelligence suggestions for learning paths, corrective actions, spot a hazard, and more
