Vendor and Supplier Management

## End-to-end visitor registration and management for any organization.

Effective vendor and supplier management is critical for organizations aiming to streamline the registration, onboarding, and communication processes across multiple, often geographically dispersed, sites.

The HSI EHS Vendor and Supplier Management Module provides powerful insights and eliminates operational blind spots. It simplifies the entire process of logging, tracking, training, and engaging with visitors through their own devices, ensuring the safety of your people, assets, systems, and environments while promoting compliance and readiness.

Use Cases

HSI's EHS Vendor and Supplier Management would benefit organizations which meet any of the following:

- Have a significant vendor and supplier base

- Host events with external attendees

- Need to ensure compliance with key standards or regulations such as OSHA, ISO45001, and more

- Need to communicate emergency protocols or hazard notifications immediately with vendors and suppliers

- Need to ensure credentials, licenses, insurances, etc and are compliant prior to undertaking work

- Are seeking to provide a consistent reception and induction experience

- Require policy acknowledgements to meet internal requirements

- Wish to implement a "zero-contact" or unmanned reception

The HSI Difference

Complete Oversight and Risk Mitigation: Know the location, and communicate instantly, with all vendors and suppliers through their own device – and all completely contactless.

Reduced Administration: Repeat vendors and suppliers are already logged, vendors and suppliers automatically notified, automated endof-day sign-out and historical sign-out (when visiting multiple sites) reduce staff intervention.

Ultimate Configurability: Customize any forms, acknowledgements, mandate a test to pass, or even a video to complete prior to gaining site access.

Generate Actionable Insights: Uncover foot traffic data, peak-times, vendor/supplier duration, at-risk entry points, non-compliant vendors/suppliers and many more diagnostics.

Flexible Deployment: From out-of-the-box simple executions, to unmanned, photo-printing kiosks, there is a capability to suit every organization.

Seamless Connectivity: Frictionless integration with the broader HSI platform and using the same UI. Link to other capabilities to track visitors through incidents and investigations for deeper insight.

Risk and Compliance: Adhere to various standards and regulations including ISO 45001, OSHA, WHS, OHS Act and more

Features:

- Hands-free on any device
- Time-stamped entry/exit logging
- Automated notifications
- Configurable forms and acknowledgements
- Deploy via kiosk or simply QR code poster at reception
