SDS/Chemical Management

Chemicals and hazardous substances are part of nearly every worksite — whether in large, industrial vats or small bottles. But many organizations are still using basic spreadsheets, or even 3-ring binders, to manage their SDS inventory, making it hard to ensure their information is up to date. This is dangerous not only from a compliance standpoint, but also from an employee safety standpoint.

HSI's Chemical Management solution makes it easy to maintain your inventory, share important information across your organization, and meet SDS Right-to-Know and Hazard Communication compliance needs.

HSI SDS/Chemical Management Platform Features:

- Instant access to any SDS, by any worker, in any location, 24/7. Online and offline.
- Configurable system views for individual facilities and users.
- Automatic SDS updates from the chemical manufacturer
- SDS Data Indexing allows you to perform detailed chemical searches, streamline your environmental reporting, and automate your hazard analysis process
- Secondary container labeling.

On-site chemical inventory (OSI) services include:

- Uploading existing SDS data into our proprietary SDS management system
- Conducting an on-site, thorough audit of all chemicals
- Categorizing and identifying the locations of all products
- Matching each product with your SDS information

Why HSI SDS/Chemical Management:

- Single-source solution for an entire chemical management program
- Creation of a custom management solution tailored to your needs
- Ability to run out-of-the-box or custom inventory reports
- Seamless integration with HSI learning management and EHS platform

Chemical manufacturers, distributors, and importers: HSI also offers SDS authoring services.
