

How to Meet Your PER-006 Training Requirements

PER-006 requires Generator Operators provide training to personnel on protection and Remedial Action Schemes (RAS). You can easily provide this training through our online training course, PER-006 for Generator Operators, which covers safeguards built into the BES.

GOP Protection Systems Training includes these topics:

- Relay Protection Fundamentals
- Breaker and Relay Basics
- Zones of Protection
- Relay Control Circuits
- Generator Fault Characteristics
- Generator System Protection
- Generator Backup Protection
- Remedial Action Schemes

PER-006 compliance looks simple, but may be more complicated than you anticipate. Entities who are already compliant with PRC-001 may be prepared for the change, but it's still important to make sure. Whether you comply with PRC-001 or not, ask yourself:

- Have you addressed training for all your generation plants?
- Do your plants use the same systems or schemes?
- Do you need to train on different systems at individual plants?
- How will you track and prove your employees have taken the training?
- How will you keep track of changes at the plants?

NERC
NORTH AMERICAN ELECTRIC
RELIABILITY CORPORATION

HSI and HSI_SOS_001 are recognized by the North American Electric Reliability Corporation as a continuing education provider who adheres to NERC Continuing Education Program Criteria.
