

Know Your Chemicals Inside and Out

Chemicals seem to find a way into our work environments whether we want them to or not. Sometimes they come in welcomed, other times they sneak inside of backpacks, hide in new shipments or just somehow magically appear in the corner cabinet. We help companies know their chemicals—whether you're a chemical manufacturer or just simply use them in your everyday operations, we help increase your visibility across all your facilities. And, we help architect and automate processes to reduce the complexity and costs of chemical management so you have more time to focus on your top priorities.

Know Your Chemicals

Before they enter your facilities

With automated material approval processes, we help you develop proactive chemical approvals and workflows based on the MSDS criteria you establish. We help bridge MSDS information across business units and enterprise applications, sharing and integrating the chemical constituent data from point of procurement.

Know Your Chemicals

When you need to search products by their ingredients

The adaptable SafeTec SDS management system goes beyond MSDS documentation to help you fully understand, analyze and report on the chemicals used in your organization. Whether evaluating banned substances or preparing a Tier II report, we help you quickly source and report on the chemicals, and their chemical ingredients, across your facilities.

Know Your Chemicals

When transferred to secondary containers

Sometimes during the lifecycle of chemicals, they move from container to container, even outside of their original containers. Companies with chemicals stored in secondary containers are generally required by regulatory standards to provide labeling for products used by employees. Labeling helps promote a safe work environment, allowing users to quickly identify materials and respond to emergencies. With SafeTec, we provide the tools needed to quickly label and track your chemicals, regardless of container type, with as much or little detail as required.

Know Your Chemicals

When OSHA visits

SafeTec's SDS management system provides a simple and intelligent way to maintain compliance. Even if chemicals aren't central to your business, their hazards are likely pervasive across your supply chain. With regulatory guidance administered by EPA, OSHA, DOT, DHS and the more recent adoption of GHS, your company may be at risk of non-compliance with environmental, safety, health, transportation and/or international laws simply because you have chemicals present at your facility.

With solutions tailored to your organization's needs, SafeTec helps you to accurately identify and close compliance gaps.
